

Installing and Using Anti-Virus Software

If you are using an up-to-date version of Windows, there is an anti-virus software packed into the operating system called Windows Defender that will perform decently for minor protection. However, if you want to take proactive measures and receive the best protection, a paid anti-virus software will be required. Since Defender is built into Windows, it is the most heavily targeted anti-virus software by hackers, and their efforts to modify or disable it to enable a virus will be a heavier focus than other services.

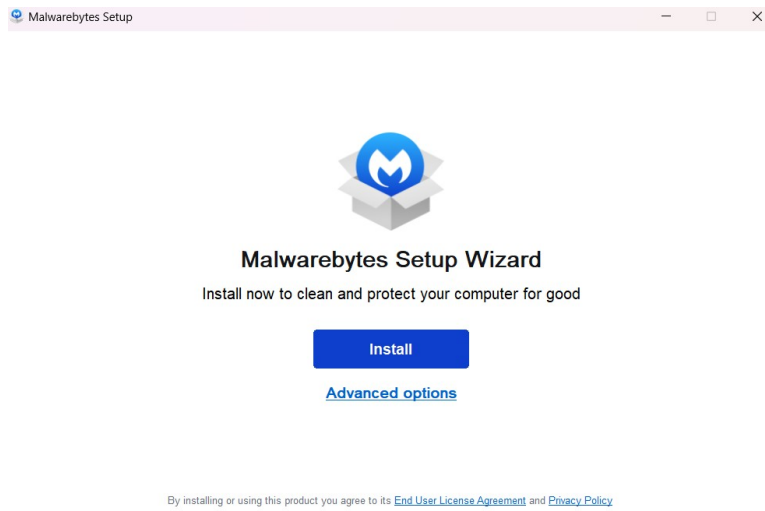

Step One – Visit the website for a reliable anti-virus software.

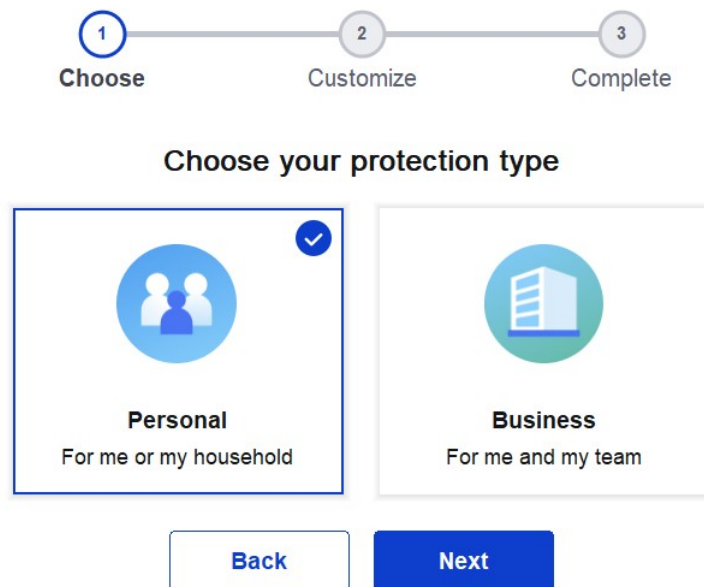

Step Two – Once the file is downloaded, click on it to begin the installation process.

Step Three – With the installer open, press the “Install” button to begin installation.

Step Four – Select the protection type that fits your intended purpose. For this installation, personal (or home) protection is needed.

Step Five – When prompted about the browser extension, choose to install for added browser protection.

Browse better with Browser Guard - it's free!

- ✓ Blocks ads, scams, trackers, and malicious websites
- ✓ Up to 4x faster web browsing
- ✓ Free extension for Chrome, Edge, and Firefox.

If you agree, the extension will install the next time you launch your browser

Step Six – With the installation complete, click “**Open Malwarebytes**”.

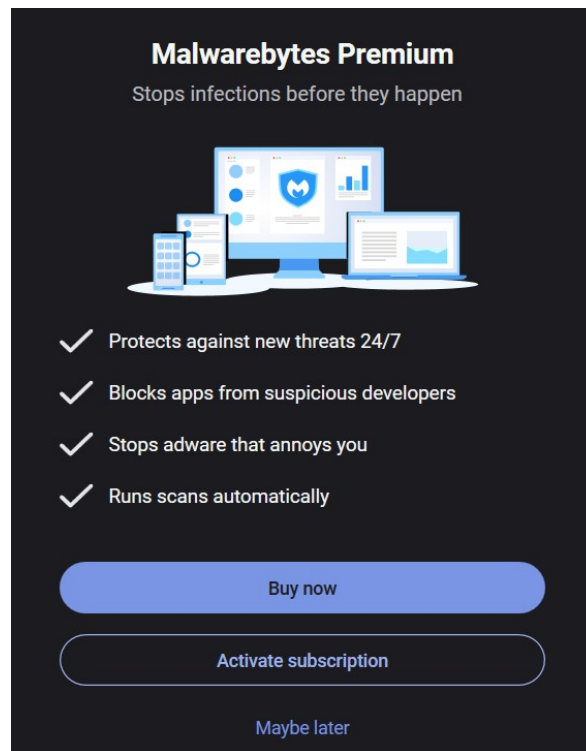

Success!

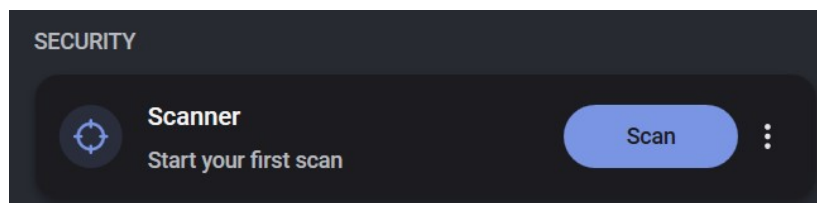

Now let's clean and protect your computer for good

Open Malwarebytes

Step Seven – When the application opens, it will ask you to enter your subscription details. If you do not possess a subscription, you can purchase one by clicking “**Buy Now**”

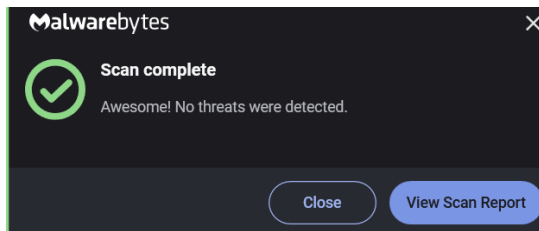

Step Eight – Once your subscription has been activated, your device is now protected by the anti-virus software. Ensure that there haven’t been any viruses laying dormant until this point by clicking the “**Scan**” button.

Step Nine – Once the scan has been completed, click “**View Scan Report**”. If you have any threats on the computer, they will display within these two screens. In the case of a virus, ensure that it has been quarantined and removed by selecting those options, should they appear.
